PROJECTS DETAILS

1. SOCIAL MMORPG 3D GAME

Skills: Unity3D Engine, C#, .Net, MSSQL, MongoDB, Network Programing.

- It was a large project, about 30 people including designer, developers, artists, testers working together to build a social MMORPG 3D game. We had a desire to build the cutting-edge game where user can interact each others in 3D enviroment.
- I cooperated with team in more than 2 years to research and develop our system, and also deliver quality game features to end-users.

2. FPS 3D CROSS-PLATFORM GAME

Skills: Unity3D Engine, C#, .Net, Mobile App Publishing, Payment Integration.

- It has being be a cross-platform game and available now on Play Store and App Store with very high download traffic everyday.
- I spent several months to join with team to build framework and integration payment with the third-party including Google, Apple and Telcos.

3. RECOMMENDATION SYSTEM

Skills: Recommendation system, Java.

- I cooperated with my colleagues in academy to research and publish paper about recommendation system. We proposed a new method used for collaboration recommendation in the academic domain. The proposed method was based on combination of probability theory and graph theory for modeling and analyzing co-author network.
- For visualizing the graph, I took a responsibility to build a back-end for modeling and building the metrics in co-author network.

4. TRACKING ORDERS, SHIPMENTS, TICKETS PLATFORM

Skills: Asp.net Web API, Entity Frameowork, MSSQL, Javascript, CSS, Bootstrap.

- I spent more than 1 year to work for an Australia Tech Startup where I led a group of people to build a platform for tracking orders, shipments, and tickets.
- I took responsibilities to build infrastructure to synchronize data between our platform and third- party eCommerce Stores including Magento, Channel Advisor, eBay.

5. BILLING SYSTEM

Skills: Asp.net Web API, Entity Framework, MSSQL, NServiceBus, Windows Service, AngularJs, CSS, Bootstrap.

- I had a chance to enrich more features for billing system for IT infrastructure service within several months. This system had multiple components, each component owned separated tasks for collecting user's data and communicated each others via NServiceBus.
- As a part of the project, my duties were to add more components to collect more kind of user's data and then build invoices based on collected data.

PROJECTS DETAILS

6. SURVEY PLATFORM

Skills: Asp.net Web API, Entity Framework, MSSQL, VueJs, ChartJs, CSS, Bootstrap, Unit test.

- It was an online survey platform based on web. Users could input their information via very interactive forms to help the survey platform collecting their data.
- As a part of the project, my main tasks were to develop features for collecting user's survey information, building charts, generating reports to visualize data.

7. TIMESHEET MANAGEMENT

Skills: Asp.net Web Api, Entity Framework, MSSQL, Reporting Service, KnockoutJs, VueJs, CSS, Bootstrap, Unit test.

- It took me several months to add invoicing features and maintain web-based application. The application has been including features: tracking employees's timesheet, managing projects/phases, handling budget, estimating costs and exporting invoices for charging customers.
- I spent several months to maintain the application and build invoicing features.

8. ENTERPRISE SERVICE BUS

Skills: Asp.net Web Api, WCF, Entity Framework, MSSQL, Reporting Service, Kafka, Windows Service, Unit test.

- The purpose of project was to replace an existing ESB architecture with a new solution to improve control on the message flow.
- I cooperated with team to implement solution based on micro-services architecture. The solution gave our customers visibility of current status or bottlenecks within their system with regards to messages and their flow.

9. CROSS PLATFORM MOBILE APP

Skills: Xamarin Forms.

- Our customer wanted a couple of mobile applications (Android, iOS) for handling their business. These applications gave them huge benefits: easier to use, more accurate, faster for staff and customers, higher productivity.
- I took responsibilities for building the applications. With my experience in cross platform mobile development, I ended up with using Xamarin Forms to make the applications. I had a chance to work deeply with Xamarin Forms and finished them in Interactive Phase of this project.
